

Introduction

Term 1 2026 has officially started and I am looking forward to working with all Smiles 4 Miles registered centres this year!

In term 1 the Smiles 4 Miles program focuses on the Drink Well message which encourages everyone to drink tap water to keep our teeth healthy. The Swan Hill region experiences hot summers which makes water important to ensure all children maintain hydration and promotes good oral health.

This issue will cover the importance of water, ways to encourage water intake for children, and celebrating the services that were awarded for Smiles 4 Miles in 2026!

Why drinking water is so important

Top reasons why tap water is best for your little one.

Encouraging your child to drink plenty of water is vital, not only for their mental and physical wellbeing, but also their teeth.

Put simply, we need water to help our body carry out all of its functions, regulate body temperature and digest food. Water is constantly lost from the body in the air we breathe, sweat and even tears, and needs to be replaced. Not drinking enough fluid can lead to dehydration, which may cause your child to become:

- tired
- unwell
- lose their ability to concentrate and learn

Tap water has the added benefit of fluoride, which helps strengthen teeth and protects against tooth decay.

How much water should your child drink?

The amount of water children need daily depends on their age, how much activity they do, the weather, their diet and health.

It's important to remind children to drink often, but as general guide, children between the ages of one and eight need to drink around four to five cups of water a day.

Tips for tapping into water

Easy ways to encourage your child to drink more tap water.

For healthy bodies and teeth your whole family should drink plenty of tap water.

Why? Tap water, in most cases, contains fluoride. This helps ensure strong and healthy teeth. Plus, it's free, and better for the environment than bottled water.

Try these easy ways to encourage drinking tap water at home:

- keep a jug of cold tap water in the fridge
- provide tap water with every meal and snack
- teach your child to help themselves to water
- pack your child's water bottle when you go out so you don't have to buy a drink if you're thirsty
- make fancy ice – look for trays that create ice blocks in all shapes and sizes.
